INSTALLATION

1. Place the antenna on or near your TV.
2. Connect the supplied coaxial cable to the antenna's 75-ohm connector, then to the TV's 75-ohm VHF connector.

If your TV does not have a 75-ohm connector, connect twin leads (not supplied) to the antenna's 300-ohm VHF terminals and the TV's VHF terminals.

Connect the twin leads between the antenna's UHF terminals and the TV's UHF terminals.

OPERATION

Extend the telescoping elements to full length and move them to an angle that produces the best reception. Hold the elements at their bases while adjusting.

*For VHF TV Channels 2–13 and FM radio stations, set **VHF/UHF** to **VHF**. Gradually turn **ROTATOR** while trying different settings of **FINE TUNING** until you get the best picture (or sound, if using the antenna with a stereo).*

*For UHF TV Channels 14–83, set **VHF/UHF** to **UHF**. Gradually turn **ROTATOR** and tilt the dish back and forth until you get the best picture. **FINE TUNING** does not affect UHF signals.*

Important: In weak-signal areas you might get slightly better reception by moving the telescoping elements.

For channels 7–13 and FM radio, shorten the telescoping elements slightly. For all VHF channels, adjust the angle of the telescoping elements.
